FIXED INCOME SECURITIES - Products & Management

Course Objectives
Fixed income securities analysis has become increasingly complex over the years. The modern trend, driven by investment banks, is towards more complex bonds which have options embedded in them that can be more attractive to both investors and firms raising capital. The complex securities can then be decomposed and rebundled to provide a further array of financial instruments. Therefore, within the bond market, there is an extensive range of securities which can be combined with derivative products to allow a wide array of portfolio strategies.

Euromoney Training’s new Fixed Income Securities - Products and Management course will provide delegates with a sound understanding for the commonly traded fixed income securities and derivative products available in the Asian financial markets. Illustrative case studies of some real Asian products will help providing delegates with detailed explanation of the valuation and risk management methodologies.

Course Content
This intensive 4-day course covers:

- Interest Rate Instruments
- Bond Mathematics
- Convertible Bonds
- Term Structure, Spot Rate and Forward Rate Models
-Bond Portfolio Management
- Credit Derivatives

Teaching Methods
The course utilizes a fine balance between lecture sessions, worked examples and exercises and case studies. One distinctive feature of the programme is the interactive real case studies of various Asian interest rate instruments and derivative products.

Participants
This course is directed to market practitioners and investors/end-users with limited exposure to fixed income securities and derivatives, who want to acquire the fundamental understanding of various aspects of pricing, valuation and risk management with bond products. It is suitable for all individuals in financial institutions and who are involved in bond investing in their recent job functions. It is also suitable for those whose jobs are related to the trading and marketing of fixed income securities and derivative instruments to gain acquaintance with the new generation of financial products.

This course would be of particular benefit to:
- Bond issuers and investors
- Fixed income traders and sales people
- Derivatives traders
- Research analysts
- Portfolio managers
- Equity fund managers
- Fixed income fund managers
- Dedicated fund managers
- Hedge fund managers
- Bank and corporate treasury managers
- Adulthood managers
- Chief financial officers
- Risk managers

Course Directors
Dr. Yue Kuon Kwok, is an Associate Professor in the Department of Mathematics, The Hong Kong University of Science and Technology. He was awarded his PhD degree in Applied Mathematics from Brown University in 1985. Dr. Kwok's research interests concentrate on pricing and risk management of equity and fixed income derivatives. He has published research articles in major research journals in financial engineering and presented invited lectures at various international finance conferences. In addition, he is the author of a widely adopted textbook titled “Mathematical Models of Financial Derivatives” published by Springer, and a popular book on the Hong Kong derivative markets. He has provided extensive consulting services to W.I. Carr Indosuisse, HSBC, Peregrine and other financial houses on various aspects of derivative trading.

Dr. Lixin Wu, is an Assistant Professor in the Department of Mathematics, The Hong Kong University of Science and Technology. Dr. Wu received his PhD degree in Applied Mathematics from UCLA. His current research interests include quantitative modelling of equity and fixed income derivatives. He has published numerous articles on financial engineering in major journals. Between 1998 and 1999, Dr. Wu was a consultant to Morgan Stanley Dean Witter (New York) on credit risk modelling of the Brady debt markets. In addition, he has acted as a consultant to local firms on exotic derivative modelling. Dr. Wu is an experienced trader of equity options.

Both instructors are columnists in the Hong Kong Economic Journal, and write on financial derivatives trading.

Course Dates
Pre-Course Delegate Questionnaire
To help us effectively establish your individual training needs, we will send you a short questionnaire upon receipt of your registration. This will allow us to gain a thorough understanding of your job duties, experience and desired objectives from attending this course. Please therefore register early to allow sufficient time for this to take place.

U E M O N E Y T R A I N I N G

Euromoney Training is a division of Euromoney Institutional Investor Publications Plc., one of the world’s leading financial publishing and information groups. Euromoney Training (Asia Pacific) was established in 1990 and since then has produced and presented courses in the Asia region to meet the high standards of quality, specialised financial, legal and audit training. Through the renowned topicality and quality of our programmes, we have established ourselves as the recognised standard for leader in these areas and continue to strive for excellence in the delivery of highly focused training courses.

The Euromoney Certificate
Delegates who successfully complete this course will receive the prestigious Euromoney Legal Training Certificate, a standard of excellence recognised worldwide.

Day One

Review of Interest Rate Instruments
- Straight-rate instruments
- Straight bonds: treasury, corporate or high yields
- Short term borrowing/lending: Repos, reverse Repos and FRAs
- Floating rate notes (FRN)
- Interest rate futures: T-Bond, T-Note and Eurodollar futures
- Interest rate swaps and currency swaps
- Convex-rate instruments
- T-Bond options
- T-Bond and Eurodollar futures options
- LIBOR instruments: caps, floor and swaptions
- Bootstrapping the yield spread: spread options
- Structured notes
- Callable bonds
- Reversionary FRNs
- Capped/Floored FRNs
- Dual currency bonds
- Currency indexed notes

Basics of Bond Mathematics
- Day count conventions and compounding frequency
- Price-yield relationship
- Measures of sensitivity: DV01, McCauley duration and convexity

Case Studies
- Notes of Credit Local de France
- Straight bond pricing methodology
- Calculating DV01, duration and convexity
- Valuing T-bond futures

Day Two

Convertible Bonds
- Conversion, call and premium protection
- Put and reset features
- Bond investment value and investment risk
- Default risk of convertibles
- Interest rate sensitivity and duration analysis
- Equity risk measures

Term Structure Models
- Term rates, forward rates and futures implied rates
- Variety of yields: zero, forward, par, LIBOR, swap, CMT and CMS
- Bootstraping method for Treasury yield curves
- From yield curves to forward rate curves

Case Studies
- Convertible bonds of Pacific Century Cyberworks

Day Three

Spot Rate Models
- Vasicek model and Cox-Ingersoll-Ross model: capturing yield curve dynamics
- Bond pricing formulae
- Term structure of volatilities
- Building the term structure: Black-Derman-Toy model and Hull-White model
- Building a binominal tree for the Hull-White model
- Pricing American T-Bond options using a calibrated tree

Forward Rate Models
- Heath-Jarrow-Morton model: all in one

- Ho-Lee model: simplicity is beauty
- Forward measure and Black's model
- Implied volatility: measurement of price rationality
- Hedging with the Black model
- Pros and cons of spot versus forward models

Case Studies
- Bootstrapping for the HIBOR yield curve
- Valuing American bond options using the Ho-Lee model
- Credit Local de France swaption

Day Four

Bond Portfolio Management
- Structure of bond markets
- International bond markets
- Eurobond markets
- US treasury and corporate debt markets
- Asian bond market
- Other sovereign debts: Eastern and Western European bonds
- Credit ratings and prices
- Credit spreads and risk premiums
- Investment grade versus non-investment grade bonds
- Sharpe ratio for portfolio return measurement
- Passive risk management
- Dedicated portfoliol/duration immunisation/horizon matching/indexed portfolios
- Active risk management
- Yield curve trading/switching/bond switch/ yield enhancement

Credit Derivatives
- Product nature of credit derivatives
- Total returns swaps
- Credit default swaps
- Credit spreads swaps and options
- Pricing framework for credit derivatives
- Term structure of credit spreads
- Merton’s structural approach
- Jarrow’s reduced form approach
- Uses of credit derivatives for trading risks
- Bank and financial institutions applications
- Protection buyers and seller’s perspectives

Case Studies
- Black model for T-Bond futures options
- Black model for LIBOR caps and swaptions
- Credit, price and YTM of the Brazilian C-bond

Course Conclusion & Summary

Documentation & Course Texts
All delegates will receive comprehensive course documentation for use during and after the course, enabling them to return to their organisations with an extensive and valuable source of information for future reference.

Notes:
A good financial calculator is essential to enable you to undertake the financial calculations encountered in the course. The Hewlett-Packard HP-12C is recommended.

Registration:
To register early to allow sufficient time for this to take place.
